**Vacuum, tracer gas (N<sub>2</sub> or He) mixtures and pressurization unit**

**iAmiata** is a bench station for mixing Helium and Nitrogen gases and creation of test leaks with rising vacuum, pressure decay and point to point micro leaks detections.

**iAmiata** has been designed specifically to perform pressure tests and leak tests of refrigerating units with the use of inert gas or tracer gases such as helium or nitrogen/hydrogen, according to the ISO 10156 Standard; before the charging of the test gas it is possible to perform a vacuum cycle so to get a first cleaning of the unit and to make a preliminary sealing test.

**iAmiata** is ideal for the tracing of leaks from components and refrigerating units, on production lines for any kind of appliance, wherever a pressure test or/and a trace gas leak test is required.

**iAmiata** can be easily interfaced with the Inficon and Pfeiffer Leak detectors, with complete control of the main functionalities, configuration and report of the leak test over the relevant copper circuits.

### Functional Characteristics:

- High versatility and portability thanks to compact design
- Maximum test pressure 55 bar
- Digital gauges for pressure and vacuum measurement
- Integrated pneumatic vacuum pump (5,2 m<sup>3</sup>/h capacity)
- Setting of working cycle parameters, monitoring and printing test reports by connecting to an external PC

- Bar code reader (optional)
- Microprocessor controlled
- Up to 1000 programmable working cycles
- Reporting of the sub cycle in progress
- Built in agreement to the European Machinery Directive, Safety standards CE marked

### Vacuuming

The iAmiata machine generally is equipped with the vacuum pump that allows vacuuming to be performed on a unit under test.

Through vacuuming unwanted air and gases are extracted from the circuit being processed, it also allows any moisture present to evaporate and be extracted as gas by the vacuum pump.

Vacuuming generally is preparatory to beginning processing on a unit under test, but it can also be omitted depending on the state of the circuit under test.

## Pressurization

Pressurization is the function that allows a circuit to be loaded with a drawn mixture at a certain user-configurable pressure. Then the machine automatically assesses the presence of leaks through the pressure drop test, and following this, if properly configured, leak detection can be carried out through an Inficon P3000 and P3000XL leak-

detector.

the pressure input from the capillary, then it is possible to say that the capillary is not obstructed and place the test OK.

This function can only be enabled by the user if the Hardware is equipped with the corresponding pressure and control valve. Please contact FT technical department for more information.

## Stress Test in iAmiata ST1

The Stress Test function belongs only to the iAmiata ST machine.

The purpose is to test the tightness of the high circuit, low circuit and the separation valve by loading nitrogen simultaneously on both sides of the circuit.

The high and low circuits are pressurized at

different pressures, and this difference must always be monitored and controlled so that a safety differential cannot be exceeded.

Then the machine automatically assesses the presence of leaks through the pressure drop test, and to follow, if properly configured, a pressurization phase and leak detection can be carried out through a leak detector from the Inficon P3000 and P3000XL family.

## Capillary monitoring in iAmiata CBT

The capillary check function allows, prior to the pressurization stage, to tell whether the capillary is clogged. Two pressure sensors must be present in the machine to perform this test.

The circuit is pressurized only on the capillary side; then the sensor on the low-pressure circuit is monitored. If the pressure readout has the same

value as the pressure input from the capillary, then it is possible to say that the capillary is not obstructed and place the test OK.

This function can only be enabled by the user if the Hardware is equipped with the corresponding pressure and control valve. Please contact FT technical department for more information.

## 真空、示踪气体 ( $N_2$ 或 $He$ ) 混合物和加压装置

**iAmiata**是一个台式工作站，用于混合氮气和氮气，并通过真空上升、压力衰减和点对点微泄漏检测来创建测试泄漏。

**iAmiata**经过专门设计，用于根据ISO 10156标准，使用惰性气体或示踪气体（例如氦气或氮气/氢气）对制冷装置进行压力测试和泄漏测试；在充入测试气体之前，可以执行真空循环，以便对装置进行第一次清洁并进行初步密封测试。

**iAmiata**非常适合需要压力测试或/和痕量气体泄漏测试的各类设备生产线上，以追踪组件和制冷装置的泄漏。

**iAmiata**可轻松与Inficon和Pfeiffer检漏仪连接，完全控制相关铜电路泄漏测试的主要功能、配置和报告。

## 抽真空

iAmiata机器通常配备真空泵，从而对被测设备进行抽真空。

通过抽真空，可从氮气罐处理的电路中提取不需要的空气和气体，还可以使存在的水分蒸发并被真空泵作为气体提取。

抽真空通常是被测装置上处理开始前的工作，但也可以根据被测电路的状态而省略。

## 增压

加压是一种允许回路在一定的用户可配置压力下加载被抽取混合物的功能。然后，机器通过压降测试自动评估是否存在泄漏，如果配置正确，则可以通过Inficon P3000和P3000XL检漏仪进行泄漏检测。

如果毛细管有压力输入，则说明毛细管没有阻塞，测试正常。

只有当硬件配备了相应的压力和控制阀时，用户才能启用此功能。请联系FT技术部门，以了解更多信息。

## iAmiata ST1中的压力测试

压力测试功能仅属于

iAmiata ST机器。

其目的是通过在回路两侧同时充入氮气来测试高压回路、低压回路和分离阀的密封性。

高、低压回路的加压压力

不同，并且必须始终监视和控制该压差，避免超过安全差。

然后，机器通过压降测试自动评估是否存在泄漏，如果配置正确，则可以通过Inficon P3000 和P3000XL系列的检漏仪进行加压阶段和泄漏检测。

## iAmiata CBT中的毛细管监测

毛细管检查功能允许在加压阶段之前判断毛细管是否堵塞。机器中必须有两个压力传感器才能执行此测试。

回路仅在毛细管侧加压；然后低压电路上的传感器受到监控。如果压力读数

和毛细管的压力输入相同，则说明毛细管没有阻塞，测试正常。

只有当硬件配备了相应的压力和控制阀时，用户才能启用此功能。请联系FT技术部门，以了解更多信息。
