*All-In-One Evacuating Pressurization and Refrigerant Charging Unit*

**iFuji-HC** is designed to fulfil the highest standards required in the processes of vacuum pressurizing and refrigerant charge.

**iFuji-HC** is equipped with an electronic control of the latest generation, high computing capacity and memory, and is managed by a smart operating system and offers easy interaction for the user.

**iFuji-HC** communicates with the User facility network and is an integral part of the production process. It has its own standard communications interfaces and software suitable to be connected to company networks to control and export the reports of the performed works directly to an external device. This also allows to integrate other digital devices ( such as a Leak detector ) directly to the machine thus speeding up and integrating Vacuum

formation, Leak detection and Charging process in a single cycle executed in complete safety.

Thanks to its smart connectivity, **iFuji-HC** is ready for tele-assistance from the mother company, FT srl, enabling significant cost and time savings in critical post-sale situations.
